Time Ended: 08:00
Type: Company Training
Instructor: Department Trainer
Hours Paid: 2.00

Description

Their was not an officers meeting. This evening we installed Active 911 in all members cell phones. This is the new paging system we will be using from now on. This system has many features that will make our response much more efficient and allows us to see who is responding in real time and where they are responding from. Also this system uses 911 mapping which will help with correct address location and hydrant mapping. Mike Weden did a great job doing the research on this system. Mike also helped dispatch install the software so it could be put into service.

Training this evening consisted of wilderness rescue training which consisted of current protocols, proper equipment, patient packaging and proper carrying of the litter. Cliff Homan did an outstanding job with this training.
